

ANGULARJS MEETUP GROUP

Project

Monthly meetups for front-end developers with a focus on AngularJS and JavaScript.

Goal

To help local developers increase their knowledge and continue to increase our current member base.

Role

As an organizer for the ATL AngularJS Meetup Group, we provide front-end developers with meetups, workshops, and mixers with a focus on AngularJS and JavaScript.

Challenge

To provide quality content at meetups on a consistent basis.

Solution

Stay up-to-date on the latest topics and trends facing front-end developers, find engaging speakers and topics, and seek member feedback through conversations and surveys.

Outcome

After only a year since our first meetup we have over 1,000 members. We average around 100 RSVPs and 45-50 members at each meetup, which is high for group of our size. Our various social media accounts have over 1,000 followers combined.

Some of my responsibilities:

- manage social media campaigns.
- plan monthly meet-up topics and secure speakers, locations, and sponsors.
- manage meetup budget.
